

Requirement Specification Document

Project Title

CityCare Hospital Management System

Introduction

The **CityCare Hospital Management System (CHMS)** is a database-based application developed to manage and automate the daily operations of a hospital. It stores and manages information related to patients, doctors, appointments, billing, pharmacy, laboratory reports, and hospital staff in a centralized database.

The main purpose of this system is to reduce manual paperwork, improve data accuracy, provide quick access to information, and enhance the overall efficiency of hospital management. The system also ensures secure storage of patient records and enables authorized users to access data based on their roles.

Business Requirements

The hospital requires a computerized system that can:

- Maintain patient, doctor, staff, and department records.
- Schedule and manage appointments.
- Store medical history and laboratory reports.
- Generate bills and record payments.
- Manage pharmacy inventory.
- Provide secure login with role-based access.
- Generate reports for hospital administration.

Functions / Operations on the Data

Patient Management

- Register new patients.
- Update and view patient details.
- Maintain medical history.
- Search patient records.

Doctor Management

- Add and update doctor details.
- View doctor profiles and availability.
- Assign doctors to departments.

Appointment Management

- Book, update, or cancel appointments.
- View doctor schedules.
- Track appointment status.

Billing Management

- Generate patient bills.
- Record payments.
- View billing history.
- Print invoices.

Pharmacy Management

- Add and update medicine details.
- Maintain stock availability.

- Remove expired medicines.
- Generate pharmacy bills.

Laboratory Management

- Record laboratory test requests.
- Upload and view test reports.
- Maintain patient test history.

Staff Management

- Add, update, and view staff records.
- Manage staff roles and departments.

User Login & Security

- User registration and login.
- Password management.
- Role-based access for Admin, Doctor, Receptionist, Pharmacist, and Lab Technician.

Benefits of the System

- Reduces paperwork and manual errors.
- Improves data accuracy and security.
- Enables quick retrieval of patient information.
- Simplifies appointment and billing processes.
- Enhances communication between hospital departments.
- Improves overall efficiency and patient service.

Conclusion

The **CityCare Hospital Management System** provides an efficient and secure way to manage hospital operations using a centralized database. It helps streamline patient care, improves administrative efficiency, and ensures reliable storage and retrieval of hospital data.
